Thermage Presents New Guidelines to Enhance Liposuction Results

Thermage is the recommended solution for post liposuction skin tightening

HAYWARD, Calif., June 25, 2008 — Thermage, Inc. (NASDAQ:THRM) announced the introduction of recommended procedure guidelines for physicians when performing Thermage in combination with liposuction. Thermage promotes improved results and helps to minimize common side effects from liposuction when used in combination with liposuction procedures.

“Uneven surface and skin laxity after liposuction are very common, especially in patients of certain age or if the patient’s weight changes,” said Dr. Alex De Souza, a Plastic Surgeon with offices in Charleston, West Virginia. “I use Thermage as the best non-invasive treatment available to correct these minor imperfections and obtain smoother results which translates to happier patients.”

The American Society of Plastic Surgeons (ASPS)*, the American Society for Aesthetic Plastic Surgery (ASAPS)** and the International Society of Aesthetic Plastic Surgeons (ISAPS) mention asymmetry, rippling of the skin, bumps, uneven surfaces and loose skin as the most common unwanted results of liposuction.

When the Thermage procedure is performed after a liposuction surgery it can help reduce these surgical side effects with proven skin tightening and deep contouring of the body. Thermage can further improve the results of liposuction, increasing patient satisfaction with the overall outcome.

“Several of our clinicians have been using Thermage for post-liposuction skin tightening and body shaping for some time now,” said Stephen J. Fanning, Chairman of the Board, President and Chief Executive Officer at Thermage. “The results they are seeing are remarkable and, in the opinion of these doctors, Thermage offers an excellent solution for the correction of unwanted results of liposuction.”

These new guidelines will be presented for the first time during a webinar by Dr. Alex De Souza on June 25th, 2008 at 5:00pm PDT. For details and to register go to www.thermage.com/physicians/events.cfm.

Thermage has been safely used on over 500,000 patients worldwide to stimulate existing collagen and promote new collagen growth. Patients benefit from a single treatment and results can be subtle to dramatic depending on the individual patient. All Thermage procedures use a unique, patented monopolar capacitive radiofrequency technology for volumetric heating of the tissue that is backed by years of clinical research and has been featured in over 45 peer-reviewed scientific articles.

About Thermage

Thermage's innovative technologies provide unique non-invasive procedures designed to smooth, tighten and contour skin, significantly expanding the non-invasive aesthetic applications physicians can offer to the rapidly growing "anti-aging" market. For more information about Thermage, call 1-510-259-7117 or log on to www.thermage.com.

All our claims are based upon our FDA clearance for the non-invasive treatment of wrinkles and rhytids, including the upper and lower eyelids, and our FDA clearance for the temporary improvement in the appearance of cellulite.

Side effects are generally mild and may include redness, swelling, blisters, bumps and rare instances of surface irregularities.
