Thermage Receives “Best in Class” Award

*The Aesthetic Trends & Technologies’ Laser & Light Technology Choice Awards™
Recognizes Thermage as Best Device for Skin Laxity*

HAYWARD, Calif., August 23, 2007 — Thermage, Inc. (Nasdaq: THRM), today announced that it has been honored with the “2006 Laser & Light Technology Choice Award” in the Best Device for Skin Laxity category for its ThermoCool® system. The award, which was presented by *Aesthetic Trends & Technologies* magazine, recognizes notable technological innovations in cosmetic laser and light technology.

“We are honored by this recognition and proud to represent the aesthetics industry as an innovator in non-invasive procedures for skin laxity,” said Stephen J. Fanning, president and chief executive officer of Thermage. “The award further validates Thermage’s leadership position and approach in developing advanced technology that will enhance physicians’ practices and provide alternative cosmetic options for consumers.”

The award was created to both recognize excellence in the industry, as well as to educate the industry on what aesthetic devices are available and recommended by peers in each category. Recipients were chosen based on product efficacy, cost, reliability, ease-of-use, patient comfort level, and product training.

“A growing number of consumers continue to seek anti-aging solutions and one of the most noticeable signs of aging is lax skin,” said Sherree Lucas, Vice President of Marketing of Thermage. “Thermage is considered the gold standard in skin tightening with no surgery, injections or downtime.”

About Thermage

Thermage’s innovative technology provides a unique non-invasive procedure designed to tighten and contour skin, significantly expanding the non-invasive aesthetic applications physicians can offer to the rapidly growing “anti-aging” market.
